

# HOT GLOVE

Keep Comfort & Safety On Hand with  
Maxx Wear Cut Resistant Gloves

Our new and improved Hot Glove with silicone grips, is still great for protecting your hands from burns without hindering hand movement. The Hot Glove offers protection from heat up to 660° F, allowing you to grill and cook over open fires, change hot light bulbs or put logs into the fireplace without burning your hands. And since it's a glove and not a mitt, your hand and finger movement is less restricted.

*Silicone printing on the palm and fingers provides a more secure grip and increases durability.*

**Use the Hot Glove to protect your hands when:**

- Removing pots and pans from the oven or stove.
- Putting logs into the fireplace.
- Changing hot light bulbs.
- Grilling.

*Caution: The Hot Glove extends the amount of time hot objects can be handled. It is not a permanent protection against heat and it is not fire-proof.*
